SALE CATALOGUE DISCLAIMER

All reasonable care has been taken in ensuring the information provided in this catalogue is correct at the time of publication. The vendors take no responsibility for the accuracy, reliability and/or interpretation of the information supplied in this brochure. Purchasers must satisfy themselves that the livestock offered meets individual requirements. The vendors retain the right to use photographs and/or information held on particular animals now and into the future.

SAFETY DISCLAIMER

The owners, employees and representatives of Wormbete Simmentals and VC Simmentals accept no liability for any accidents that may occur at the Allawah Sale Complex. Although such occurrences are rare, any persons attending the Wormbete Simmental Sale do so at their own risk.

THE PREFERRED CHOICE OF STOCKFEED SINCE 1984

Conqueror Milling Company has been manufacturing premium stockfeed and vegetable protein meal for a range of Australian and international markets since 1984.

Our product range includes pellets and licks specially formulated for beef, dairy, sheep, horses, poultry and alpacas.

Most importantly, we provide professional and personalised customer service which is always backed by expert knowledge.

WELCOME TO WORMBETE

Registered Simmentals since 1972

It is with great pleasure that we present this catalogue for our sixth on property sale. There is no doubt the past year has been a challenging one climatically, therefore we are more proud than ever to present to you this exceptional draft of predominantly polled bulls and heifers for your consideration and inspection. Every Wormbete bull and heifer has had to stand up and perform to hold their place in this sale and have been selected for the key profit drivers of *easy doing ability, weight gain, fertility and structural soundness*. This catalogue presents a great opportunity to update your sire battery or add to your female herd.

We are extremely impressed with how well our cattle have responded to the climatic and management demands of this dry period. It has enabled us to take a really close look at our herd and identify those cattle that can and do meet every challenge put in front of them. There are no passengers amongst this Wormbete draft. Our genetics must thrive, prosper, breed and produce and it is our aim to ensure these cattle leave our property and move to yours ready to contribute and deliver the results you are looking for.

As always we launch the sale with our traditional bulls, whose evenness, style and performance this year is second to none. They are a great group of high quality bulls with opportunities for both the seedstock and commercial buyer. The polled herd sires Wormbete Jackaroo J64, Barana Eastlake and Callendale Frank feature prominently together with polled AI sires, Wormbete Geelong, Double Bar D Spitfire and Wormbete Kent K22.

This year brings an increased number of Black Simmental bulls to the sale. The genetics of these bulls are largely based on the progressive Bonnydale stud from W.A and showcases top sires including Bonnydale Blackhawk H274, RCR Augustus R54, and Bonnydale Bettis J150. We are extremely pleased with the progress of our Black Simmental genetics and the place they now have within our stud. The Triple C females are also breeding exceptionally well and we are very fortunate to have their proven contribution.

The bonus of our stud expansion is the additional number of herd improving Wormbete females we're now able to offer for sale. The heifer draft includes both PTIC Autumn and Spring calving heifers in addition to a selection of rising 12 month old heifers. They present the first opportunity to secure progeny of VPFS Brantz 12B (P) who we used as an AI sire successfully over heifers. His progeny to date display great style, substance, evenness and depth.

Our catalogue again provides a full disclosure of the performance and structural attributes of the bulls and heifers. It's no secret how fastidious we are in our selection process, which is underpinned by the structural assessment of our sale cattle and all replacement females by Liam Cardile of Beef XCel, with an additional guarantee of no hoof trimming. As one of only a few Simmental breeders in Australia who undertake and publish this assessment we are proud of the superior structural characteristics our cattle exhibit. This structural assessment is backed up by a full complement of weight and scanning data as part of our rating as a 4 star Breedplan herd. We have also taken the step to 50K DNA test all our sale bulls and many of our sale heifers with these results aimed to be available prior to sale day. This will further enhance the accuracy of our rigorous performance data on each animal to assist in your selection process and decision making.

We are again delighted to invite Stuart and Samantha Moeck of VC Simmentals to join and complement our sale. Stuart and Sam are committed breeders of Simmentals and the standard of cattle from our studs combined will ensure there is something on offer to suit the needs of every buyer.

Thank you for your continued interest and support of Wormbete. We wish you all the very best for the year ahead and like everyone, hope 2019 brings relief to the climatic challenges across Australia. We are happy to answer any questions you may have at any time and are very pleased to chat about any aspect of our 2019 sale draft. Enjoy!

Warm Regards, *John, Nicole, Mim and Judy Hopkins*

You can count on us.

Across the country, our people work hard to know livestock best. We've been in the business for more than 150 years and we're committed to provide the best marketing options for every season. That's why you can rely on Landmark.

VC SIMMENTALS

Valley Creek Simmentals was founded in 1999 on traditional European bloodlines with the first female Simmental purchased from the Wendouree stud when I was just 16 years old. Since then we have scoured the country side for the best donors we can find.

Our core priority from the start has been to enhance the key profit driver that is our cow herd, full of moderate framed breeders with softness and the ability to produce under all conditions. Mating decisions are always made with a vision of female progeny uppermost in mind. We are continually trying to optimise growth and carcass traits.

We are extremely proud of this years draft and thank everyone for the continued support and vote of confidence you have shown in our breeding program. Here at VC we are striving to deliver the best polled, freshest Simmental genetics available.

We really have ramped up our ET program by implanting 50 plus eggs this year, which has enabled us to set up the black side of the program faster. Furthermore to this, we have been quietly working on IMF's for some time and this years draft of bulls have averaged over 5.06 and the heifers have averaged 6. Also, to this over half of the VC bulls are recommended as heifer bull options.

When you buy VC Simmental genetics you will get a "Modern" Simmental industry focused animal. The resulting progeny will calve easily, grow, finish quickly and grade higher and add EMA.

Our main focus:

- **Phenotype** - Whilst we use the very latest of breeding technologies, phenotype is a major part of our breeding program. Our bulls will be quiet, polled, have great skin type and exhibit weight, softness and easy doing ability.
- **Calving Ease** - Here at VC we took the initiative 2 years ago to weigh every calf born, this ensures that the data supplied is 100% accurate. So whether you buy a terminal or a self replacing sire from us you will have an accurate estimation to the weight of your calves. We also record calving ease, scrotal and gestation length.
- **Growth is the Key** - Weight is "Money". Cattle must grow quickly to meet MSA Standards. They must be in a moderate, mature weight package to maintain positive fat scores and effective replacement females.
- **Carcass Focused** - We use ultrasound scanning for EMA, IMF% and fat cover as a major selection criteria. Combined with weight for age data, this gives us the strongest information on what our cattle can do. This data is then submitted to Breedplan for evaluation.

We are extremely grateful to John and Nicole Hopkins for giving us this opportunity to join them in the on-property 6th Annual Sale. We believe that both studs combined will ensure that there is something on offer for every buyer.

We thank you and our valued clients, we hope you like our hospitality and enjoy your purchases.

Kind Regards,

Stuart and Samantha Moeck

SALE INFORMATION

INSPECTION

We welcome inspection of the cattle before the sale to provide you with the necessary time to ensure you are selecting the correct bull or female for your program. Please contact John on 0427 102 748 or Stuart on 0419 465 242 to arrange this. Inspections will be from 10am on sale day, Friday 1 March 2019. Selling will commence at 1pm. All times quoted are NSW Daylight Savings time.

DIRECTIONS

The sale will be held on property at "Allawah" ILLABO, which is located 7kms south east of the village of Illabo. From Illabo, turn over the railway line and veer left towards Eurongilly and travel south east on Eurongilly Road for approximately 4kms then turn left into Allawah Road and travel 3.4kms to "Allawah". The property entrance is located on the right.

TRANSPORT

Ben Makeham of Makehams Transport will be present on sale day and is the recommended carrier.

Wormbete and Valley Creek will offer FREE CARTAGE:

- to buyers residing within a 100km radius of the Allawah sale complex.
- along the major route from Illabo to Dubbo in the north and from Illabo to Wodonga in the south.
- Australia-wide (mainland) to any registered individual buyer who purchases three (3) or more sale lots (excluding semen lots).

REBATE

Selling agents are Landmark and GTSM. Outside agents are entitled to a 4% rebate under the following conditions:

- introducing the buyer in writing to the selling agent at least 24 hours prior to the sale and settling within 7 days, and
- the agent who has provided the introduction must attend the sale with their client or on the clients behalf.

HEALTH

Both Wormbete and Valley Creek herds are Accredited J-BAS Status 7 herds so livestock are free to move anywhere in Australia except Western Australia.

All cattle have been tested negative for Pestivirus. All bulls and heifers have undergone a full 7in1 and Pestivirus vaccination program with booster vaccinations prior to sale.

Wormbete cattle have been drenched with Panacur. VC cattle have been drenched with Ivomec.

All Wormbete bulls have been semen tested by Independent Breeding Services. All VC bulls have been semen tested by Ironmines Veterinary Clinic.

STRUCTURAL ASSESSMENT

Sale lots have been inspected and passed an independent structural accredited assessment. All assessments are published in the sale catalogue.

Wormbete cattle were inspected by Liam Cardile of BeefXcel (Accreditation No. 1033) on 14 December 2018.

VC cattle were inspected by R. Evans of Bovine Scanning Services (Accreditation No. 1018) on 10 December 2018.

PHONE BIDDING

If you are unable to make it to the sale, phone bidding can be arranged by contacting the selling agents Landmark and GTSM, or John and Stuart.

TRANSFER

All sale cattle are registered with Simmental Australia and are eligible for transfer to your ownership. Please advise on your bidding registration sheet.

INSURANCE

We recommend insuring your purchases at the fall of the hammer. A Landmark representative will be present on sale day to assist with this.

All cattle are at the purchasers risk from the fall of the hammer.

CATERING

Morning tea and an appetising BBQ lunch will be available on sale day compliments of the vendors.

Complimentary refreshments will be offered post sale. Please stay on after the sale to enjoy a relaxed drink and chat with us.

ACCOMMODATION

If you require accommodation in the area, we are happy to provide details based on your travel origin. A range of accommodation options are available in the nearby towns Junee, Cootamundra, Gundagai and Wagga Wagga. Please contact us if we can be of assistance.

SAFETY OF VISITORS

When entering sale pens, please ensure your safety by taking note of your surrounds and do not crowd sale animals. We recommend that persons under the age of 16 do not enter sale pens. Animals being offered for sale are selected for their quiet temperament under normal yard handling and paddock conditions, however sale day is not considered a normal day in the life of a bull or heifer and is quite different to anything they have ever experienced. We would like you to be aware of this and kindly request that you use common sense and be alert at all times.

We do not envisage any problems on sale day but feel it is our duty of care to advise you of the importance of respecting our policy of always practicing the responsible husbandry of cattle.

GST

All lots are sold exclusive of GST.

GUARANTEE

To the best of our knowledge all of the cattle are in sound working order at the time of the sale and where applicable have been independently evaluated for fertility and structural soundness. None of the sale animals have had their feet trimmed in any way.

Following the sale, it is important that normal care be taken and good husbandry practices be observed with regard to the management of your purchase. In the rare event of a bull proving to be infertile or incapable of natural service within 6 months of the purchase date, the vendor will credit the purchase price, less the salvage of the bull, provided the problem is not caused by injury, illness or disease incurred after taking delivery.

Claims must be accompanied by a relevant veterinary certificate when requested by either vendor. Vendors retain the right to obtain an independent veterinary confirmation of any claim.

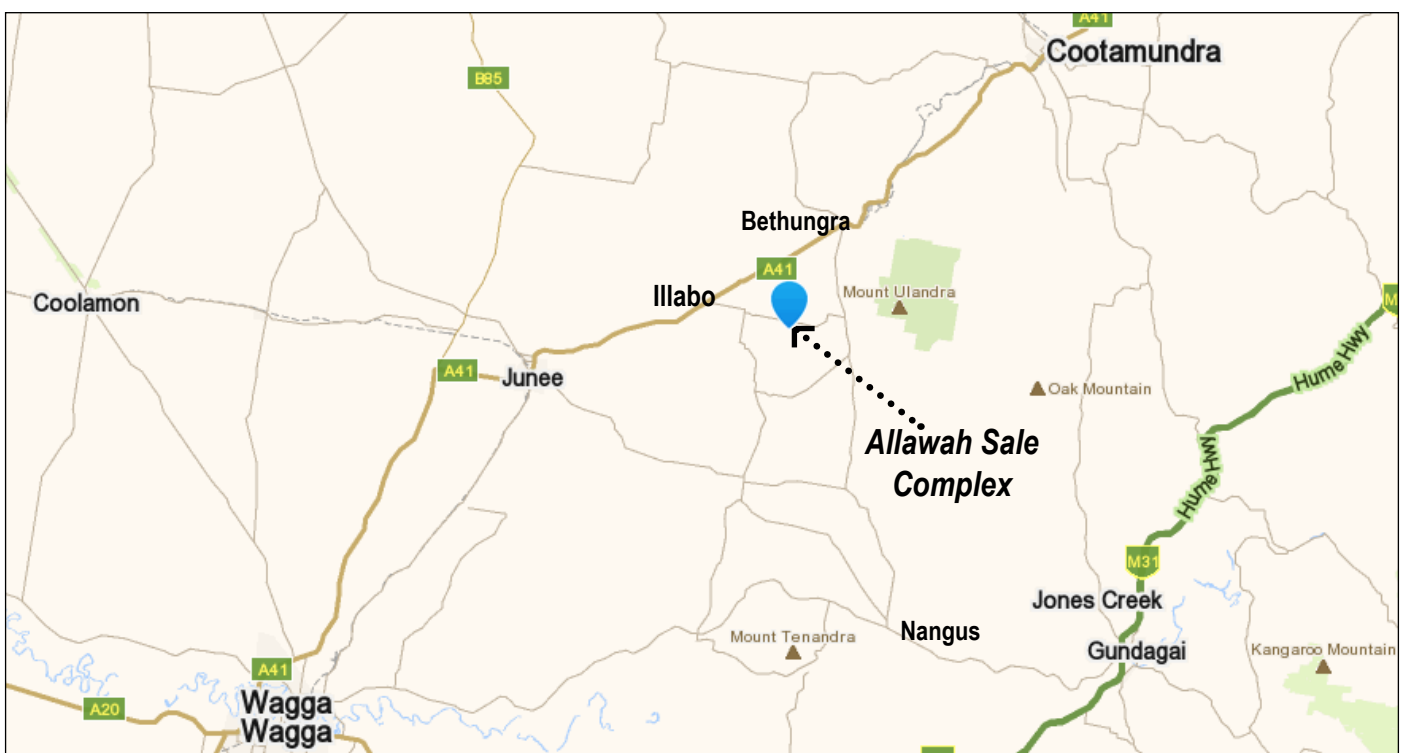

BRINGING YOUR BULL OR HEIFER HOME

Our bulls and heifers have always been run in mobs and never on their own. We recommend that when you bring them home you have some other cattle e.g. pregnant cows or steers in the yards so they have company to settle in with. Feed them in the yards and give them time to become familiar with their new surrounds. Wormbete cattle have never been on a truck so that will be a new experience for them.

Our cattle have been mustered predominantly by motor bikes and ATV's and have also been worked by kelpie dogs.

LOCATION MAP

"Allawah" is located 70kms north east of Wagga Wagga (50 minutes drive), 25kms north east of Junee (20 minute drive) and 35km south west of Cootamundra (30 minutes drive). Please Note: Detailed directions from Illabo are listed on the opposite page.

SIMMENTAL GROUP BREEDPLAN - UNDERSTANDING THE FIGURES

An animals breeding value is its genetic merit, half of which will be passed onto its progeny. While it is not possible to determine an animals true breeding value, it is possible to estimate it. These estimates are called **Estimated Breeding Values (EBVs)**.

Both Wormbete and VC are committed supporters of performance recording for the Simmental BREEDPLAN analyses and as such undertake a committed recording of performance traits including, Gestation Length, Calving Ease, Birthweight, 200, 400 and 600 Day Weights, in addition to scanning for EMA, IMF, Rib and Rump, Scrotal Circumference, plus Docility Scores.

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

An accuracy value is published in association with each EBV, which is usually displayed as percentage value immediately below the EBV. The accuracy value provides an indication of the reliability of the EBV in estimating the animals genetics. The accuracy of an EBV will increase as more information is collected on that animal and its relatives e.g. progeny.

The value of EBVs over raw data is that they are the fast track to improving the genetic profile and bottom line performance of any herd. EBVs give a benchmarked breeding predicatability (genotype) while raw data is a scale of how the animals presents (phenotype).

JANUARY 2019 SIMMENTAL GROUP BREEDPLAN EBVS FOR 2017 BORN CALVES (ABBREVIATED)										
	BW	200D	400D	600D	SS	EMA	RIB	RUMP	RBY	IMF
BREED AVERAGE	+0.8	+19	+34	+43	+0.5	+2.6	+0.2	+0.1	+0.6	+0.2

BIRTH EBV

BWT: is based on the measured birth weight of progeny and adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth.

GROWTH/WEIGHT EBVS

200D: (KG) is calculated from the weight of the animals taken between 80 and 300 days of age and is the best estimate of an animals genetic merit for growth to early ages.

400D: (KG) is calculated from the weight of progeny taken between 301 and 500 days of age and is the best estimate of an animals genetic merit for yearling weight.

600D: (KG) is calculated from the weight of progeny taken between 501 and 900 days of age and is the best estimate of an animals genetic merit for growth beyond yearling age.

FERTILITY EBV

SCROTAL SIZE (SS): (CM) is an indicator of male fertility in regards to semen quality and quantity. Higher EBV's indicate higher fertility. SS is also positively associated with female fertility and therefore selection for increased SS will result in reduced age at calving of female progeny.

CARCASE EBVS

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in EMA at the 12/13th rib site of a 300kg carcass. A higher EBV indicates better muscling on animals. Sires with relatively higher EBVs are expected to produce better muscled and higher percentage yielding progeny.

RIB FAT & RUMP FAT EBVS: Rib Fat EBV (mm) estimates the genetic differences in subcutaneous fat depth at the 12/13th rib site and P8 rump site and are adjusted to a standard 300 kg carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RBY: Retail Beef Yield (%) represents total (boned out) meat yield as a higher percentage of a carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses and are generally considered more favourable.

IMF%: Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300kg carcass. Depending on market targets, larger more positive values are generally more favourable.

PLEASE NOTE: ONLY JANUARY 2018 SIMMENTAL TRANS TASMAN GROUP ESTIMATED BREEDING VALUE (EBVS) CAN BE VALIDLY COMPARED BETWEEN HERDS

BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain reducing the overall productivity of the Australian Beef Industry.

Structural soundness must be a primary reference for improving future progeny regardless of whether they are future breeders or destined for the dinner plate. Selecting animals with superior structural soundness is paramount to genetically improving structural traits in a beef breeding enterprise. The use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately.

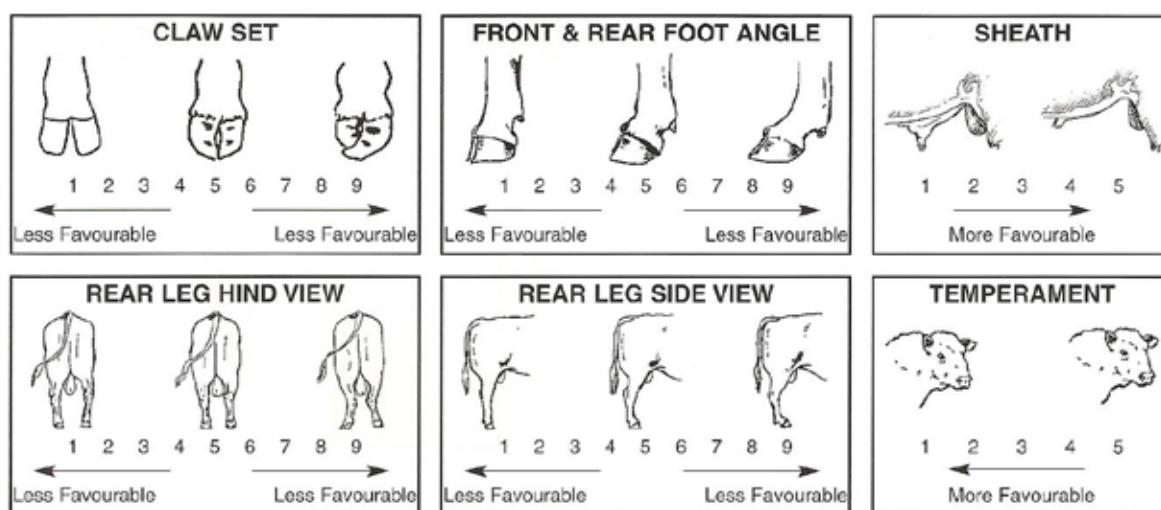

Both Wormbete and VC are committed to the annual independent structural assessment of sale cattle and replacement females and thus see the benefits of structural improvements first hand. Our animals now exhibit superior leg and foot structure. This is confirmed, for example, by 100% of the Wormbete 2019 sale draft and replacement heifers scoring a 4, 5 or 6 for their Rear Legs (Side View) and Rear Legs (Hind View) Structural Assessment, identifying them as suitable for any seedstock breeding program. Further to this, 100% of the animals assessed scored the ideal score 5 for either Rear Leg scores or both.

HOW TO USE THE SYSTEM:

The Beef Class Structural Assessment system is a collection of unbiased factual data measuring claw set, front and rear foot angle and rear leg side and hind view. Sheaths and temperament are also scored by the assessor.

The Beef Class Structural Assessment System uses a 1 - 9 scoring system:

- A score of 5 is ideal. (Note: Temperament Score of 1 is preferable).
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of 2 or 8 are low scoring animals and should be looked closely at before purchasing.
- A score of 1 or 9 should not be catalogued and are considered culls.

This cosmetically perfect, deep dark red polled bull is an impressive start to our 2019 sale. Out of a first calving heifer and closely related to the great Wormbete Jackaroo J64 (P), Nobleman N28 presents as an enticing sire prospect. Incredible hair and skin type, impeccable structure, great disposition, broad muzzle, polled pedigree, big eye patches.....we could go on and on about the potential this bull offers, but it's best to just let him just show it all off!

The youngest of the Wormbete traditional offering, Northern N141 steps right up to the plate to secure his place at Lot 5. Sensational performance with immense eye appeal, this dark red, balanced bull has loads to offer any beef enterprise. His dam hails from the great Libby line, who produce great calves year in and out. For anyone who has ever purchased a Libby female, when you look at this bull you can rest assured that you made a great breeding selection.

Some bulls always look good every time you see them, and this fellow is certainly one of them. A stylish bull on finer bone, with another of the magnificent skin and hair types typical of his impeccable pedigree. The Jackaroo sons just keep on coming and it is easy to see why they stepped up in this tough year and made the cut.

Homozygous polled, homozygous black. We start this year's Black draft with a SimAngus bull - which some might find surprising, however when you look at this impressive bull you will understand why. Exceptional growth, power and performance - this is an eye catching bull that is put together exceptionally well. Extremely soft and with a great sire outlook; his EMA, IMF and fat scans were at the top of his group in December and shows the contribution he will make to the core business of growing beef and improving profits. Top 10% for indexes.

Homozygous polled, homozygous black. The first of the spring drop blacks. Excellent temperament, great structure, weight for age good length and plenty of power. Heaviest of the spring drop black bulls at scanning and the largest EMA. Bonnydale have claimed Black Hawk H274 to be arguably one of the most influential Simmental sires in Australia, and when you look at these progeny it is easy to agree. A very impressive young sire.

F	R	F	R	F	R	F	R	MUSCLE	SHEATH	TEMP
										
6	5	6	5	5	5	5	5	35	B-	4

Homozygous polled, homozygous black. With their curve bending genetics, the birthweight, early growth and yearling EBVs of these Augustus/Guava F218 progeny sit in the top 15% for the breed. When combined with an EMA and IMF in the top 20%, you can easily understand the merit bulls such as these have to the business of beef.

Presenting fertile, proven, and consistent female genetics that you can rely upon is crucially important to us. The female is, after all, 50% of the genetic equation and when she is tasked with the role of gestating and raising the calf, her role becomes even more vital. This is a stylish and showy heifer that will make that balanced and sustained contribution. Stacked with polled bloodlines, she displays good carriage and eye appeal. AI'd to FGAF Guerrero 810Y on 24 June 2018 and covered by Wormbete Leonardo L108 (P) from 9 July 2018 to 26 August 2018. PTIC.

Out of a wonderfully maternal and productive cow, Fifi N139 is an exceptionally well bred heifer due to calve in matter of weeks. Tremendous structure with good length from hip to pin and plenty of capacity. Unfortunately, despite having polled parents she managed to pick up the horned gene, however this should be no deterrent to those with an eye for picking future breeders. A matriarchial heifer who was AI'd to FGAF Guerrero 810Y on 24 June 2018 and covered by Wormbete Leonardo L108 (P) from 9 July 2018 to 26 August 2018. PTIC.

The first VPFS Brantz 12B progeny to be offered for sale in Australia. We used Brantz extensively as an AI sire over our heifers in 2017 extremely successfully, and this resultant drop of calves are very promising. Jenny P31 is a polled, compact heifer with plenty of style. Easy fleshed, well muscled and with a great flank she has a sound future ahead of her. Out of a smart first calving Geelong heifer who has demonstrated her breeding quality.
