SALE CATALOGUE DISCLAIMER

All reasonable care has been taken in ensuring the information provided in this catalogue is correct at the time of publication. The vendors take no responsibility for the accuracy, reliability and/or interpretation of the information supplied in this brochure. Purchasers must satisfy themselves that the livestock offered meets individual requirements. The vendors retain the right to use photographs and/or information held on particular animals now and into the future.

SAFETY DISCLAIMER

The owners, employees and representatives of Wormbete Simmentals and VC Simmentals accept no liability for any accidents that may occur at the Allawah Sale Complex. Although such occurrences are rare, any persons attending the Wormbete Simmental Sale do so at their own risk.

THE PREFERRED CHOICE OF STOCKFEED SINCE 1984

Conqueror Milling Company has been manufacturing premium stockfeed and vegetable protein meal for a range of Australian and international markets since 1984.

Our product range includes pellets and licks specially formulated for beef, dairy, sheep, horses, poultry and alpacas.

Most importantly, we provide professional and personalised customer service which is always backed by expert knowledge.

WELCOME TO WORMBETE

Registered Simmentals since 1972

We are proud to present this catalogue for our seventh on property sale. It is no secret just how tough conditions have continued to be across vast areas of Australia and we know first hand the difficulties producers have faced in managing their beef herds and making the tough management decisions. From our end, we are continually energised and encouraged by just how well our Simmental cattle have coped with the drought: their resilience, their performance, their commercial relevance, and their fertility. They have met every challenge put in front of them and therefore we know that the bulls and heifers in this catalogue are cattle that will leave our property and move to yours ready to deliver the results you are looking for. They present as a great opportunity to update your sire battery or add to your female herd.

Our sale numbers are slightly reduced this year in response to the continued drought and recognition of the recent fires. Every animal has had to meet our performance criteria to hold their place in this catalogue and thus there are no passengers here. These cattle were born into a drought, were weaned early down to weights of 100kg and managed appropriately, and from that time have stood up and moved forward, meeting all our expectations.

All sale cattle have been 50K DNA genotyped, sire verified, with their polled and colour status also confirmed to assist with bringing certainty to your selection. All cattle have a full complement of performance recording behind them, with a minimum of nine traits recorded for each, including Gestation Length, Birthweight, Calving Ease, Growth, Carcase and Fertility. We have reinforced our place as a top Simmental Breedplan herd which allows us to be at the forefront of genetic advancement as it is implemented.

Our catalogue again includes full independent structural assessments by Liam Cardile of Beef Xcel of all bulls and heifers. It's no secret how fastidious we are in our selection process of our sale cattle and all replacement females. We don't loosely state our cattle are structurally correct - we know they are. This is an important selection tool for our herd, bringing superior longevity, fertility and profits for both ourselves and our clients. A guarantee of no hoof trimming is also enforced.

We again launch the sale with our traditional and black bulls, who are a great group of high quality young sires with opportunities for both the seedstock and commercial buyer. New AI sires include Wheatland Circuitbreaker, VPFS Brantz 12B and Woonallee Las Vegas, who compliment paddock sires including Wormbete Jackaroo J64 (P) and Woonallee Lumberjack (B).

A wonderful group of specially selected rising 2 year old PTIC heifers are also on offer with the majority in calf to AI sires including PHS BankRoll 345B (P) and Wormbete Millenium M91 (PP). All our stud females were given a tight 6 week joining in less than ideal seasonal conditions and their resultant 97% PTIC preg-scanning results demonstrate the exceptional fertility and performance of our females.

We are again delighted to invite Stuart and Samantha Moeck of VC Simmentals to join and complement our sale. Stuart and Sam are committed breeders of Simmentals and the standard of cattle from our studs combined will ensure there is something on offer to suit the needs of every buyer.

Thank you for your continued interest and support of Wormbete. We wish you all the very best for the year ahead and like everyone, hope 2020 brings relief to the climatic challenges across Australia. Our thoughts and prayers are particularly with those impacted by the recent fires. Having been through such an event in the past, we know just how emotionally and physically debilitating it can be, both to people and livestock.

We are happy to answer any questions you may have at any time and are very pleased to chat about any aspect of our 2020 sale draft. Enjoy!

Warmest Regards, *John, Nicole, Mim and Judy Hopkins*

VC SIMMENTALS

Valley Creek Simmentals was founded in 1999 on traditional European bloodlines with the first female Simmental purchased from the Wendouree stud when I was just 16 years old. Since then we have scoured the country side for the best donors we can find.

Our core priority from the start has been to enhance the key profit driver that is our cow herd, full of moderate framed breeders with softness and the ability to produce under all conditions. Mating decisions are always made with a vision of female progeny uppermost in mind. We are continually trying to optimise growth and carcass traits.

We are extremely proud of this years draft and thank everyone for the continued support and vote of confidence you have shown in our breeding program. Here at VC we are striving to deliver the best polled, freshest Simmental genetics available in the world.

This year has been extremely tough on all producers, but we have been fortunate enough to keep up the extensive ET program by implanting 50 plus eggs this year. We believe this sets the tone for future developments, which has enabled us to deliver the best genetics to the industry for the future growth of the breed moving forward. Here at VC breeding Simmental cattle is not just a business it is a way of life. Our commitment to developing the breed to be the first choice European breed is our vision for the future moving forward. Also, to this over half of the VC bulls available are recommended as heifer bull options.

When you buy VC Simmental genetics you will get a "Modern" Simmental industry focused animal. The resulting progeny will calve easily, grow, finish quickly and grade higher and add EMA.

Our main focus:

- **Phenotype** - Whilst we use the very latest of breeding technologies, phenotype is a major part of our breeding program. Our bulls will be quiet, polled, have great skin type and exhibit weight, softness and easy doing ability.
- **Calving Ease** - Here at VC we took the initiative 5 years ago to weigh every calf born, this ensures that the data supplied is 100% accurate. So whether you buy a terminal or a self replacing sire from us you will have an accurate estimation to the weight of your calves. We also record calving ease, scrotal and gestation length.
- **Growth is the Key** - Weight is "Money". Cattle must grow quickly to meet MSA Standards. They must be in a moderate, mature weight package to maintain positive fat scores and effective replacement females.
- **Carcass Focused** - We use ultrasound scanning for EMA, IMF% and fat cover as a major selection criteria. Combined with weight for age data, this gives us the strongest information on what our cattle can do. This data is then submitted to Breedplan for evaluation.

We are extremely grateful to John and Nicole Hopkins for giving us this opportunity to join them in the on-property 7th Annual Sale. We believe that both studs combined will ensure that there is something on offer for every buyer.

We thank you and our valued clients, we hope you like our hospitality and enjoy your purchases.

Kind Regards,

Stuart and Samantha Moeck

SALE INFORMATION

INSPECTION

We welcome inspection of the cattle before the sale to provide you with the necessary time to ensure you are selecting the correct bull or female for your program. Please contact John on 0427 102 748 or Stuart on 0419 465 242 to arrange this. Inspections will be from 9am on sale day, Friday 6 March 2020. Selling will commence at 11am. All times quoted are NSW Daylight Savings time.

DIRECTIONS

The sale will be held on property at "Allawah" ILLABO, which is located 7kms south east of the village of Illabo. From Illabo, turn over the railway line and veer left towards Eurongilly and travel south east on Eurongilly Road for approximately 4kms then turn left into Allawah Road and travel 3.4kms to "Allawah". The property entrance is located on the right. Allawah is located 70kms north east of Wagga Wagga, 25kms north east of Junee and 35kms south west of Cootamundra.

TRANSPORT

Ben Makeham of Makehams Transport will be present on sale day and is the recommended carrier.

Wormbete and VC will offer FREE CARTAGE:

- to buyers residing within a 100km radius of the Allawah sale complex.
- along the major route from Illabo to Dubbo in the north and from Illabo to Wodonga in the south.
- Australia-wide (mainland) to any registered individual buyer who purchases three (3) or more sale lots.

REBATE

Selling agents are Nutrien Livestock. Outside agents are entitled to a 4% rebate under the following conditions:

- introducing the buyer in writing to the selling agent at least 24 hours prior to the sale and settling within 7 days, and
- the agent who has provided the introduction must attend the sale with their client or on the clients behalf.

HEALTH

Both Wormbete and VC herds are Accredited J-BAS Status 7 herds so livestock are free to move anywhere in Australia except Western Australia.

All cattle have been tested negative for Pestivirus. All bulls and heifers have undergone a full 7 in 1 and Pestivirus vaccination program with booster vaccinations prior to sale.

Wormbete cattle have been drenched with Ivomec Injectable. VC cattle have been drenched with Ivomec.

All Wormbete bulls have been semen tested by Independent Breeding Services. All Wormbete heifers were PTIC by Shane Thomson of Holbrook Vet Centre on 10 January 2020. All VC bulls have been semen tested by Ironmines Veterinary Clinic.

DNA, POLLED AND COAT COLOUR TESTING

All bull and heifer sale lots (traditional and black) have been 50K tested and parent verified to provide you with pedigree assurance.

All bull and heifer sale lots (traditional and black) have been DNA tested for polledness and coat colour with the results indicated in the catalogue where applicable.

STRUCTURAL ASSESSMENT

Sale lots have been inspected and passed an independent structural accredited assessment. All assessments are included in the sale catalogue on Page 11.

Wormbete cattle were inspected by Liam Cardile of BeefXcel (Accreditation No. 1033) on 17 December 2019.

VC cattle were inspected by R. Evans of Bovine Scanning Services (Accreditation No. 1018) on 16 December 2019.

PHONE BIDDING

If you are unable to make it to the sale, phone bidding can be arranged by contacting the Nutrien selling agents Tim Woodham and James Croker, or John and Stuart.

INSURANCE

We recommend insuring your purchases at the fall of the hammer. A Nutrien Insurance representative will be present on sale day to assist with this. All cattle are at the purchasers risk from the fall of the hammer.

TRANSFER

All sale cattle are registered with Simmental Australia and are eligible for transfer to your ownership. Please advise on your bidding registration sheet.

SALE INFORMATION CONTINUED

CATERING

Morning tea and an appetising BBQ lunch will be available on sale day compliments of the vendors.

Complimentary refreshments will be offered post sale. Please stay on after the sale to enjoy a relaxed drink and chat with us.

ACCOMMODATION

If you require accommodation in the area, we are happy to provide details based on your travel origin. A range of accommodation options are available in the nearby towns Junee, Cootamundra, Gundagai and Wagga Wagga. Please contact us if we can be of assistance.

SAFETY OF VISITORS

When entering sale pens, please ensure your safety by taking note of your surrounds and do not crowd sale animals. We recommend that persons under the age of 16 do not enter sale pens. Animals being offered for sale are selected for their quiet temperament under normal yard handling and paddock conditions, however sale day is not considered a normal day in the life of a bull or heifer and is quite different to anything they have ever experienced. We would like you to be aware of this and kindly request that you use common sense and be alert at all times.

We do not envisage any problems on sale day but feel it is our duty of care to advise you of the importance of respecting our policy of always practicing the responsible husbandry of cattle.

GST

All lots are sold exclusive of GST.

GUARANTEE

To the best of our knowledge all of the cattle are in sound working order at the time of the sale and where applicable have been independently evaluated for fertility and structural soundness. None of the sale animals have had their feet trimmed in any way.

Following the sale, it is important that normal care be taken and good husbandry practices be observed with regard to the management of your purchase. In the rare event of a bull proving to be infertile or incapable of natural service within 6 months of the purchase date, the vendor will credit the purchase price, less the salvage of the bull, provided the problem is not caused by injury, illness or disease incurred after taking delivery.

Claims must be accompanied by a relevant veterinary certificate when requested by either vendor. Vendors retain the right to obtain an independent veterinary confirmation of any claim.

BRINGING YOUR BULL OR HEIFER HOME

Our bulls and heifers have always been run in mobs and never on their own. We recommend that when you bring them home you have some other cattle e.g. pregnant cows or steers in the cattle yards so they have company to settle in with. Provide them with feed and water and give them time to become familiar with their new surrounds. Wormbete cattle have never been on a truck so that will also be a new experience for them.

Our cattle have been mustered predominantly by motor bikes and ATV's and have also been worked by kelpie dogs.

SIMMENTAL GROUP BREEDPLAN - INTERPRETING THE FIGURES

Both Wormbete and VC are committed supporters of performance recording for the Simmental BREEDPLAN analyses and as such undertake a committed recording of performance traits including, Gestation Length, Calving Ease, Birthweight, 200, 400 and 600 Day Weights, in addition to scanning for EMA, IMF, Rib and Rump, measuring Scrotal Circumference, plus Docility Scores.

An animals breeding value is its genetic merit, half of which will be passed onto its progeny. While it is not possible to determine an animals true breeding value, it is possible to estimate it. These estimates are called **Estimated Breeding Values (EBVs)**. The accuracy of an EBV will increase as more information is collected on that animal and its relatives e.g. progeny.

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

The value of EBVs over raw data is that they are the fast track to improving the genetic profile and bottom line performance of any herd. EBVs give a benchmarked breeding predicatability (genotype) while raw data is a scale of how the animals presents (phenotype).

JANUARY 2020 SIMMENTAL GROUP AVERAGE EBV'S FOR 2018 BORN CALVES (ABBREVIATED)																
	BIRTH		GROWTH				FERT	CARCASE					INDEXES			
BREED AVERAGE	GL	BW	200D	400D	600D	MILK	SS	EMA	RIB	RUMP	RBY	IMF	DM	EM	NT	VT
	-1.4	+0.7	+19	+34	+43	+8	+0.4	+2.5	+0.3	+0.1	+0.6	+0.3	+36	+43	+23	+32

BIRTH EBVs

GL: Gestation length EBVs are calculated from both the joining date and date of birth of calves. Lower Gestation Length EBVs are considered more favourable.

BWT: is based on the measured birth weight of progeny and adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. Whilst low Birth Weight EBVs are favoured for calving ease they can also be associated with lower overall growth potential.

GROWTH/WEIGHT EBVs

200D: (KG) is calculated from the weight of the animals taken between 80 and 300 days of age and is the best estimate of an animals genetic merit for growth to early ages.

400D: (KG) is calculated from the weight of progeny taken between 301 and 500 days of age and is the best estimate of an animals genetic merit for yearling weight.

600D: (KG) is calculated from the weight of progeny taken between 501 and 900 days of age and is the best estimate of an animals genetic merit for growth beyond yearling age.

MILK EBV: Milk EBVs provide an estimate of the maternal contribution of a dam to the 200 day weight of her calf. In the case of sires, this estimates the maternal contribution that his daughters will make to the 200 day weight of their progeny. Larger, more positive, 200 Day Milk EBVs are generally more favourable, depending on environment.

FERTILITY EBV

SCROTAL SIZE (SS): (CM) is an indicator of male fertility in regard to semen quality and quantity. Higher EBV's indicate higher fertility. SS is also positively associated with female fertility and therefore selection for increased SS will result in reduced age at calving of female progeny.

CARCASE EBVs

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in EMA at the 12/13th rib site of a 300kg carcass. A higher EBV indicates better muscling on animals. Sires with relatively higher EBVs are expected to produce better muscled and higher percentage yielding progeny.

RIB FAT & RUMP FAT EBVs: Rib Fat EBV (mm) estimates the genetic differences in subcutaneous fat depth at the 12/13th rib site and P8 rump site and are adjusted to a standard 300 kg carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

CARCASE EBVs (CONTINUED)

RBY: Retail Beef Yield (%) represents total (boned out) meat yield as a higher percentage of a carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses and are generally considered more favourable.

IMF%: Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300kg carcass. Depending on market targets, larger more positive values are generally more favourable.

INDEXES

Domestic Maternal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 60-70 days). Steers are marketed at 430 kg live weight (240 kg HSCW and 6 mm P8 fat depth) at 14 months of age. Daughters are retained for breeding.

Export Maternal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia targeting the export trade. Steers are finished on grain (e.g. 120 days) and marketed at 700 kg live weight (380 kg HSCW and 8 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

Northern Terminal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia targeting the export trade. Steers are finished on grass and marketed at 630 kg live weight (345 kg HSCW and 12 mm P8 fat depth) at 28 months of age. This is a terminal production system therefore no daughters are retained for breeding.

Vealer Terminal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia targeting the vealer trade. Vealers are weaned and sold at 8 months of age weighing 350 kg (195 kg HSCW and 6 mm P8 fat depth). This is a terminal production system therefore heifers are not retained for breeding purposes.

PLEASE NOTE: ONLY JANUARY 2020 SIMMENTAL TRANS TASMAN GROUP ESTIMATED BREEDING VALUE (EBVs) CAN BE VALIDLY COMPARED BETWEEN DIFFERENT HERDS

BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

Structural soundness must be a primary reference for improving future progeny regardless of whether they are future breeders or destined for the dinner plate. Selecting animals with superior structural soundness is paramount to genetically improving structural traits in a beef breeding enterprise. The use of the Beef Class Structural Assessment System in the Australian seedstock industry has produced a marked improvement in herds which have shown a commitment to using the information appropriately.

It's widely recognised that structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd.

Structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain reduced income for the producer or feedlot, thus reducing the overall productivity of the Australian Beef Industry.

Both Wormbete and VC are committed to the annual independent structural assessment of all sale cattle and all replacement females by accredited INDEPENDENT assessors, Liam Cardile of BeefXcel (Wormbete), and Roger Evans of Bovine Scanning Services (VC). As such, we continue to see the benefits of structural improvements within our herds first hand.

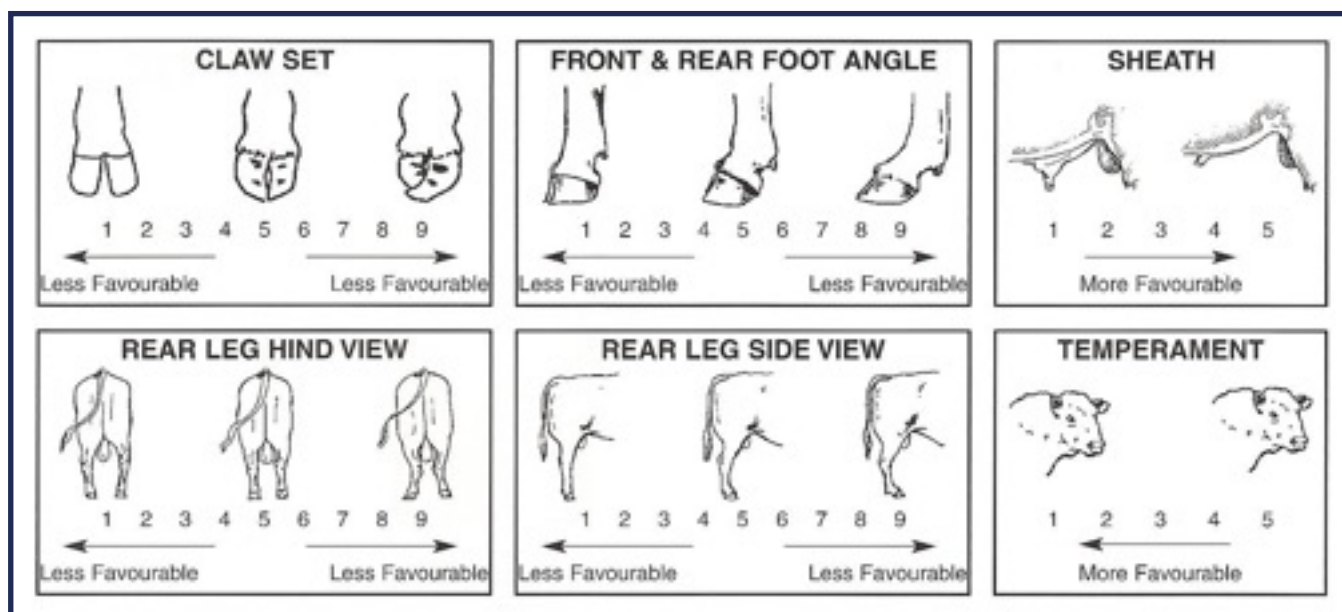

Wormbete cattle were assessed by Liam Cardile on 17th December 2019. VC cattle were assessed by Roger Evans on 16th December 2019.

HOW TO USE THE SYSTEM:

The Beef Class Structural Assessment system is a collection of unbiased factual data measuring claw set, front and rear foot angle and rear leg side and hind view. Sheaths and temperament are also scored by the assessor.

The Beef Class Structural Assessment System uses a 1 to 9 scoring system:

- A score of **5** is ideal. (Note: Temperament Score of 1 is preferable).
- A score of **4 or 6** shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of **3 or 7** shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of **2 or 8** are low scoring animals and should be looked closely at before purchasing.
- A score of **1 (except temperament) or 9** should not be catalogued and are considered culls.

STRUCTURAL ASSESSMENTS - 2020 SALE LOTS

Homozygous polled, cherry red, body goggled bulls of this quality and eye appeal are extremely hard to come by and this bull ticks all the right boxes. Structurally faultless with terrific performance, length, depth and an excellent temperament. A highly recommended young bull with the best of Wormbete behind him to kick off the 2020 sale.

Admired since a calf, Publican P32 (P) presents as a bull with plenty of substance and opportunity. Out of a beautiful dam and displaying the great temperament, rich red coat and sound structure his maternal line is noted for. Calving ease EBVs in the top 1% and Indexes in the top 20% for Traditional Simmentals are added bonuses to this credible package. Above photo does not do him the justice he deserves.

A Jackaroo brother with the phenotype, genotype and structural credibility of his pedigree. Deep red, this bull offers extra length, neck extension and carriage. Jackaroo J64 (P) has bred us beautiful, dynamic females who already are having a huge herd influence. Pincott P135 (P) will be no different. Heterozygous polled, with small scurs. A great choice for breeding productive self-replacing females.

A cracking set of EBVs for Birth and Growth is just one of the attributes of this outstanding Homozygous polled bull. Used lightly in stud due to his appeal as an exceptionally easy-doing, soft, quiet and moderate framed sire package. Out of the same dam as our 2019 top priced bull, Nobleman N28, with the elite Judy line again showing its proven performance. His AI twin brother was to join him in the sale ring, however sadly was injured just prior to print. P22 is a really good carcase bull. Homozygous Polled.

Traits Recorded: CE, BW, 200WT, 400WT, 600WT, FAT, EMA, IMF, DOC

This classy heifer with softness, length and style sets the high standard for this year's Wormbete female offering. From a well established maternal line whose females show fertility and milking ability, P89 will mature into a wonderful breeding cow. Al'ed to the homozygous polled Wormbete Millenium M91 (PP) on 10.10.2019. Verified as PTIC to this joining.

A heifer that deserves close inspection. Out of a beautiful cow and the only heifer to be offered by Bullockhills Liberty (P). P140 oozes softness and is smooth and wide from hip to pin. Al'ed to Champs Bravo (P) on 10.10.2019 and verified as PTIC to this mating. Champs Bravo semen is now very hard to come by and this is a great last opportunity to secure his genetics, with this lovely heifer the absolute bonus.

If you are chasing a traditional for the show ring or the donor pen, we cannot recommend Heidi enough. Heidi is a twin, her full sibling is the only heifer we have retained out of the spring drop females. The first Woonallee Landlord L129 heifer to sell combining with VC's most profitable cow family that never misses. VC Heidi is definitely bred in the purple. AI'd on the 28th October to FGAF Guerrero 810Y & ran with VC Pay Day (Starwest Pol Blue Print x Woonallee Katie B111). Will be PTIC before sale.
