SALE CATALOGUE DISCLAIMER

All reasonable care has been taken in ensuring the information provided in this catalogue is correct at the time of publication. The vendors take no responsibility for the accuracy, reliability and/or interpretation of the information supplied in this brochure. Purchasers must satisfy themselves that the livestock offered meets individual requirements. The vendors retain the right to use photographs and/or information held on particular animals now and into the future.

SAFETY DISCLAIMER

The owners, employees and representatives of Wombete Simmentals and VC Simmentals accept no liability for any accidents that may occur at the Allawah Sale Complex. Although such occurrences are rare, any persons attending the Wombete Simmental Sale do so at their own risk.

Maternal Matters: Our Females are the Heart of our Herd

HHH WORMBETE

Registered Simmentals since 1972

Our Stud Philosophy

Breed balanced, fertile, robust, easy doing, structurally sound and commercially relevant Simmental cattle that are proven for longevity and performance.

Uphold the principles of integrity, honesty and transparency in our actions, and in our liaison with clients and other breeders.

Be pleased but not complacent, focused but with vision, educated but still willing to learn.

A Second Welcome for 2021

First and foremost.....welcome! A move to a Spring on-property sale has been on our radar for some time, with its foundations entrenched in the plan to offer our bulls as yearlings to provide the astute cattle person with our Simmental genetics sooner and with greater efficiency. The benefits of using yearling bulls is well documented and building momentum. There is no benefit in these bulls sitting in our paddock until they are rising 2 years of age - they are much better out in your herds working for you! Similarly, our heifers at this age gives you the flexibility to select your sire of choice for them and enables them to fit seamlessly into your breeding program.

The Wormbete cattle in this catalogue were weaned at six months of age onto a Phalaris based pasture. Since late May they have been grazing on broad-scale multi-species crops of vetch, radish, turnip and oats. Hay has been available for supplementary roughage, with a light ration of oats slowly introduced prior to sale. Everything these cattle have eaten since birth has been grown on our property enforcing our traceability and nutritional knowledge. There is nothing fancy or extreme in the preparation of these bulls, as our plan is for them to leave our property and move to yours fit, mobile and ready to work. They are not pumped or pampered - we don't have time for it - and the result are bulls and females bred for resilience, fertility and longevity.

We remain committed to our stud philosophy and breeding protocols, ensuring we make focused, considered and relevant decisions to breed cattle that we like, our clients like and want in their herds, and meet the needs of those in the business of beef. We run our cattle with a commercial focus, using good old fashioned 'cattle sense'. Our females are the heart of our herd and they stand up and stand out. We run them in sizeable contemporary groups to gain the benefits of better comparisons between their performance and breeding efficiency, as well as the seasonal utilisation of pasture and grazing crops as we work to sustainably manage and improve our land, soil and water.

The quality assurance of our cattle is extremely important to us and hence all sale animals are backed up by performance data, independent structural and docility assessments plus health and fertility checks. The sale will be interfaced with Auctions Plus, and with the anticipated potential increase in unsighted purchases due to the current restrictions on travel, this catalogue includes comprehensive yet simply expressed genetic and phenotypic information. We are pleased to again welcome Stuart and Sam Moeck to join us for our 9th sale together. The cattle on offer from our two studs will ensure the specific needs of buyers are met.

Thank you for your interest in and support of our program. We welcome your enquiry and are here to assist you in any way possible.

Warm Regards, John, Nicole, Mim & Judy Hopkins

"Simmental cattle are a valued part of our family's agricultural history and an integral part of our future"

AuctionsPlus

How to Register and Bid on AuctionsPlus

1

Go to www.auctionsplus.com.au to register at least 48 hours before the sale.

2

Select “**Sign Up**” in the top right hand corner.

3

Fill out your name, mobile number, email address and create a password.

4

Go to your emails and confirm the account.

5

Return to AuctionsPlus and log in.

6

Select “**Dashboard**” and then select “**Request Approval to Buy**”.

7

Fill in buyer details and once completed go back to Dashboard.

8

Complete buyer induction module (approx. 30 minutes).

9

AuctionsPlus will email you to let you know that your account has been approved.

10

Log in on sale day and connect to auction.

11

Bid using the two-step process – unlock the bid button and bid at that price.

12

If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

Email: info@auctionsplus.com.au

VC SIMMENTALS

Welcome to our first spring sale with Wormbete Simmentals. We are excited to offer 8 black Simmental bulls & 4 black Simmental females. As we write this, I have finished my job as a chicken farmer to therefore focus more on the cattle part of our operation to further improve the Simmental breed & push the commercial advantages of Simmentals. We are moving the home base of VC to Binda NSW approximately about 2 hours southwest of our current home of Bowral NSW. We will still keep & grow the lease country in the Bowral area moving forward. The one thing that really stands out to us is "Don't Give Up On Your Dreams" **#MakingSimmentalsGreat**

After the successful autumn sale, it has always been the intention to sell bulls in the spring as the amount of demand for the spring joining has increased in the south greatly over the past few years. The science & genetic gain in the yearling bull program is something that cannot be ignored by the commercial operation into the future as we put downward pressure on a more sustainable operation, we have been using the stay EPD in our donor selection for few years which has been moving the herd into the next level of a very balanced data approached into the future. We believe the softer bigger bodied maternally focused VC herd will make the commercial producers a longer lasting cow herd & therefore a measurable sustainable product into the future.

We are so excited to offer this draft of bulls, we believe this type of black Simmental can really push the message about the benefits of the Simmental cross & grow the breed in the Australian marketplace. The cow herd at VC is what sets us apart from the competition plus the insatiable appetite for new & continuous improvements in our program.

We are extremely grateful to the Hopkins family for giving us this opportunity to join them on their 9th Annual on property sale. We believe that both studs combined will ensure that there is something on offer for every progressive buyer. We thank you & our valued clients we hope you like our hospitality & enjoy your new purchases plus we are genuinely interested in what you are trying to do in your program at home and are here to help you achieve your goals in your program, not just sell bulls!

Kind Regards,

Stuart & Samantha Moeck

SALE INFORMATION

INSPECTION

We welcome inspection of the cattle before the sale to provide you with the necessary time to ensure you are selecting the correct bull or female for your program. Please contact John on 0427 102 748, Stuart on 0419 465 242, or the Nutrien Livestock team to arrange this. Inspections will be from 10am on sale day, Wednesday 15th September 2021. Selling will commence at 1pm.

DIRECTIONS

The sale will be held on property at "Allawah" ILLABO, which is located 7kms south east of the village of Illabo. From Illabo, turn over the railway line and veer left towards Eurongilly and travel south east on Eurongilly Road for approximately 4kms then turn left into Allawah Road and travel 3.4kms to "Allawah". The property entrance is located on the right. Allawah is located 70kms north east of Wagga Wagga, 25kms north east of Junee and 35kms south west of Cootamundra.

COVID SAFE

Covid rules will apply and Covid safe practices will be in place. Details of all attendees must be provided by scanning our QR Code or signing in upon arrival.

TRANSPORT

As part of our service we offer FREE CARTAGE:

- to buyers residing within a 100km radius of the Allawah sale complex.
- along the major routes from Illabo to Dubbo in the north and from Illabo to Wodonga in the south.
- Australia-wide (mainland) to any registered individual buyer who purchases three (3) or more sale lots.

REBATE

Selling agents are Nutrien Livestock. Outside agents are entitled to a 4% rebate under the **strict following conditions**:

- introducing the buyer in writing to the selling agent at least 24 hours prior to the sale and settling within 7 days, and
- where border restrictions do not impede their attendance, the agent who has provided the introduction must attend the sale with their client or on their client(s) behalf.

TRANSFER

All sale cattle are registered with Simmental Australia and are eligible for transfer to your ownership. Please advise on your bidding registration sheet.

INSURANCE

We recommend insuring your purchases at the fall of the hammer. A Nutrien Insurance representative will be present on sale day to assist with this. All cattle are at the purchaser's risk from the fall of the hammer.

GST

All lots are sold exclusive of GST.

ACCOMMODATION

A range of accommodation options are available in the nearby towns Junee, Cootamundra, Gundagai and Wagga Wagga. Please contact us if we can be of assistance.

BIDDING & AUCTIONS PLUS

If you are unable to make it to Illabo, the sale will be interfaced on Auctions Plus. Please see Page 6 for details on how to register and bid using the Auctions Plus platform.

Phone bidding can be arranged by contacting the Nutrien agents Tim Woodham and James Croker, or John and Stuart.

PHOTOS & VIDEOS OF SALE LOTS

Videos and pedigree links for sale lots will be available on Auctions Plus prior to sale day.

Photos and video links will also be posted on the respective stud Facebook pages and the Wormbete Simmentals website - www.wormbetesimmentals.com.au

SALE DAY CATERING

A welcoming morning tea, lunch and cold drinks will be available on sale day compliments of the vendors for those who are able to attend.

Covid Safe practices for the preparation and serving of food and drink will be enforced. Hand sanitiser will be available.

SAFETY OF VISITORS

When entering sale pens, please ensure your safety by taking note of your surrounds and do not crowd sale animals.

Persons under the age of 16 should not enter sale pens. All animals being offered for sale are selected for their quiet temperament under normal yard handling and paddock conditions, however sale day is not considered a normal day in the life of a bull or heifer and is quite different to anything they have ever experienced. We would like you to be aware of this and kindly request that you use common sense and be alert at all times. We do not envisage any problems on sale day but feel it is our duty of care to advise you of the importance of respecting our policy of always practicing the responsible husbandry of cattle.

IN-HERD SEMEN RIGHT

Wormbete and VC reserve the right to collect semen from any bull catalogued for sale for respective in-herd use only. If acted upon, any collection will be arranged at a time convenient to the purchaser with every care taken to minimise any risk to the health of the bull. All expenses will be met by the vendors.

LOCATION MAP

SALE INFORMATION CONTINUED

DNA, POLLED AND COAT COLOUR TESTING

All bull and heifer sale lots have been 100K DNA tested and parent verified to provide you with pedigree, polled and coat colour assurance. The results for each sale lot are detailed in the catalogue.

STRUCTURAL ASSESSMENT

All sale lots have been inspected and passed an independent accredited structural assessment (feet and legs). These assessments are included in the sale catalogue on Pages 15 and 16 and are a valuable source of additional information - particularly where you are unable to attend the sale due to travel restrictions. Wormbete cattle were inspected by Liam Cardile of BeefXcel (Accreditation No. 1033) on 30 July 2021. VC cattle were inspected by Roger Evans of Bovine Scanning Services (Accreditation No. 1018) on 1 August 2021.

GUARANTEE

To the best of our knowledge all of the cattle are in sound working order at the time of the sale and where applicable have been independently evaluated for fertility and structural soundness.

NONE of our sale animals were assisted at birth and NONE have had their feet trimmed in any way.

Following the sale, it is important that normal care be taken and good husbandry practices be observed with regard to the management of your valuable purchase. In the rare event of a bull proving to be infertile or incapable of natural service within 6 months of the purchase date, the vendor will credit the purchase price, less the salvage of the bull, provided the problem is not caused by injury, illness or disease incurred after taking delivery.

Claims must be accompanied by a relevant veterinary certificate when requested by either vendor. Vendors retain the right to obtain an independent veterinary confirmation of any claim.

HEALTH & FERTILITY

Both Wormbete and VC herds are Accredited J-BAS Status 7 herds so livestock are free to move anywhere in Australia except Western Australia.

All cattle have been tested free of Pestivirus. All bulls and heifers have undergone a full 7 in 1 and Pestivirus vaccination program with booster vaccinations prior to sale. Wormbete cattle have been drenched with Ivomec Injectable. VC cattle have been drenched with Ivomec. Wormbete cattle have also received booster shots of Virbac Multimin, AD&E and B12.

All Wormbete bulls have been semen tested by Independent Breeding Services. All VC bulls have been semen tested by Ironmines Veterinary Clinic.

BRINGING YOUR BULL OR HEIFER HOME

Our bulls and heifers have always been run in large mobs and have never been on their own. They were weaned from their dams at 6 months of age and since then have been running with their contemporary groups.

When they leave Allawah they will be leaving the security of their large mob and will arrive in an environment that is not familiar to them. We recommend that when you bring them home you have some other cattle e.g. pregnant cows or steers in the cattle yards so they have company to settle in with. Provide them with good hay and clean water and give them time to rest and recover and become familiar with their new surrounds. Wormbete cattle have never been on a truck so that will also be a new experience for them.

Our cattle have been mustered predominantly by motor bikes and ATV's and have also been worked regularly by kelpie dogs. They are knowledgeable and respectful of electric fencing.

Please always be considerate to your bull or heifer and ensure their annual booster vaccinations are kept up date. They will reward you back with years of service and great progeny.

YEARLING BULLS: THE OPPORTUNITIES

The use of yearling bulls in progressive breeding programs is well documented with those beef producers reaping the rewards and capitalising on the genetic and financial opportunities. Here's a brief summary of some of the key points:

GENETIC GAIN

The ability to source the latest and best genetics 6 -12 months earlier bringing accelerated genetic gain to a herd.

LONGEVITY

Yearling bulls have an extended working life. Calves are on the ground from yearling bulls when 2 year old bulls have only just been sold. This equates to more calves during the bulls lifetime and hence a lower cost per calf over time. In simple terms - an overall lower cost of production equals more profit per calf.

INBUILT SOUNDNESS

Yearling bulls are keen, young, fit and with high libidos. They adapt quickly to their new environment and get straight to work. They are found to concentrate on getting cows and heifers pregnant, rather than fighting. They are less prone to injury as they haven't been overly prepared.

EASE OF MANAGEMENT

Yearling bulls are easy to handle and manage. Selection for temperament is also important to consider.

THE PARAMETERS

Our yearling Simmental bulls are aged 12-15 months and weigh between 500-650kgs. They have a minimum scrotal circumference of 35cm and are well grown to be able to successfully join both to heifers and cows. Industry research combined with our own visual observation shows that whilst they are sexually inexperienced, they quickly get the hang of things!

YEARLING BULL MANAGEMENT

- When you get them home, ensure you give them a few weeks to settle in. Try to avoid putting them with older bulls, however if you do - please keep a close eye on them.
- Ideally, join yearling bulls alone or with bulls of similar age to avoid potential issues of bullying and injury by older bulls.
- Yearling bulls can handle between 25-40 females for their first joining, however a joining of 30 females per bull is recommended. Join them for 6-8 weeks only and then give them a chance to rest and recover. As with all bulls, keep an eye on their health and condition throughout joining.
- After joining, drench the bulls and place them on good quality feed. Working can impact their appearance, and attention to their diet post joining will overcome this and allow them to recover.

FURTHER INFORMATION

Further information on the benefits of yearling bulls and their management can be found in the following Beef Central and Department of Agriculture articles:

<https://www.beefcentral.com/genetics/weekly-genetics-review-opportunities-with-yearling-bulls/>

<https://www.dpi.nsw.gov.au/animals-and-livestock/beef-cattle/breeding/bull-selection/yearling-bulls>

<https://www.beefcentral.com/genetics/weekly-genetics-review-selling-yearling-bulls-a-winner/>

SIMMENTAL GROUP BREEDPLAN - INTERPRETING THE FIGURES

An animal's breeding value is its genetic merit, half of which will be passed onto its progeny. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates are called **Estimated Breeding Values (EBVs)**. The accuracy of an EBV will increase as more information is collected on that animal and its relatives e.g. progeny.

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups. The value of EBVs over raw data is that they are the fast track to improving the genetic profile and bottom line performance of any herd. EBVs give a benchmarked breeding predictability (genotype) while raw data is a scale of how the animals present (phenotype).

AVERAGE EBV'S FOR 2019 BORN BLACK SIMMENTAL CALVES (ABBREVIATED)																		
AVERAGE	CALV-EASE		BIRTH		GROWTH				FERT	CARCASE					INDEXES			
	DIR	DTRS	GL	BW	200	400	600	MILK	SS	EMA	RIB	RUMP	RBY	IMF	DM	EM	NT	VT
	+4.5	+4.2	-2.3	-0.9	+21	+34	+35	+4	+0.2	+2.7	+1.2	+0.4	-0.4	+0.5	+44	+53	+25	+38

AVERAGE EBV'S FOR 2019 BORN TRADITIONAL SIMMENTAL CALVES (ABBREVIATED)																		
AVERAGE	CALV-EASE		BIRTH		GROWTH				FERT	CARCASE					INDEXES			
	DIR	DTRS	GL	BW	200	400	600	MILK	SS	EMA	RIB	RUMP	RBY	IMF	DM	EM	NT	VT
	+1.9	+0.3	-1.0	+1.0	+19	+32	+38	+8	+0.4	+2.4	+0.1	+0.0	+0.6	+0.1	+37	+45	+24	+35

CALVING EASE EBVs

DIR: (%) Calving Ease (DIR) EBVs estimate the genetic differences in the ability of a sire's calves to be born unassisted from 2-year-old heifers. Higher, more positive EBVs are more favourable.

DTRS: (%) Calving Ease (DTRS) EBVs estimate genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age without assistance. Higher, more positive EBVs are more favourable.

BIRTH EBVs

GL: (Days) Genetic differences between animals in the length of time from the date of conception to the birth of the calf (analysed for AI/ET calves). Lower GL EBVs indicate shorter gestation length.

BWT: (KG) is based on the measured birth weight of progeny and adjusted for dam age. Lower EBVs indicate a lighter calf at birth.

GROWTH/WEIGHT EBVs

200D: (KG) is calculated from the weight of the animals taken between 80 to 300 days of age and is the best estimate of an animal's genetic merit for growth to early ages.

400D: (KG) is calculated from the weight of progeny taken between 301 and 500 days of age and is the best estimate of an animal's genetic merit for yearling weight.

600D: (KG) is calculated from the weight of progeny taken between 501 and 900 days of age and is the best estimate of an animal's genetic merit for growth beyond yearling age.

MILK EBV: (KG) provide an estimate of the maternal contribution of a dam to the 200-day weight of her calf. Larger, more positive, 200 Day Milk EBVs are generally more favourable in herds.

FERTILITY EBV

SCROTAL SIZE (SS): (CM) is an indicator of male fertility in regard to semen quality and quantity. Higher EBVs indicate higher fertility. SS is also positively associated with female fertility.

CARCASE EBVs

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in EMA at the 12/13th rib site in a standard weight steer carcass. Larger, more positive EMA EBVs are generally more favourable.

CARCASE EBVs (CONTINUED)

RIB FAT & RUMP FAT EBVs: Rib Fat EBV (mm) estimates the genetic differences in subcutaneous fat depth at the 12/13th rib site and P8 rump site and are adjusted to a standard weight steer carcass. More positive EBVs may be more favourable.

RBY: Retail Beef Yield (%) represents total (boned out) meat yield as a higher percentage of a carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses and are generally considered more favourable.

IMF%: Intra-Muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a standard steer weight carcass. Larger more positive values are generally more favourable.

INDEXES

Domestic Maternal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 60-70 days). Steers are marketed at 430 kg live weight (240 kg HSCW and 6 mm P8 fat depth) at 14 months of age. Daughters are retained for breeding.

Export Maternal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia targeting the export trade. Steers are finished on grain (e.g. 120 days) and marketed at 700 kg live weight (380 kg HSCW and 8 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

Northern Terminal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia targeting the export trade. Steers are finished on grass and marketed at 630 kg live weight (345 kg HSCW and 12 mm P8 fat depth) at 28 months of age. This is a terminal production system therefore no daughters are retained for breeding.

Vealer Terminal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia targeting the vealer trade. Vealers are weaned and sold at 8 months of age weighing 350 kg (195 kg HSCW and 6 mm P8 fat depth). This is a terminal production system therefore heifers are not retained for breeding purposes.

HOMOZYGOUS (HOMO) POLLED - WHAT DOES IT MEAN?

All bulls and heifers have their genetic testing results for their polled status specified in the catalogue. Generally speaking, Black Simmental cattle are genetically homozygous polled, however in Traditional Simmentals this can be different as they historically are a horned breed. Wormbete and VC have undertaken intensive selection for the polled gene over the past decade and the results are that over 95% of our traditional calves born each year are now polled, without sacrificing breeding quality and performance. BUT - what does Homozygous (Homo) Polled and Heterozygous (Hetero) Polled mean? The table below aims to explain:

BULL	COW OR HEIFER	CALVES FROM THE JOINING
HOMOZYGOUS (HOMO) POLLED: the bull carries two copies of the polled gene		
Homozygous Polled	Homozygous Polled	100% Polled
	Heterozygous Polled (1 copy of the polled gene)	100% Polled
	Horned	100% Polled
HETEROZYGOUS (HETERO) POLLED: the bull is polled, but carries one polled gene and one horned gene		
Heterozygous Polled	Homozygous Polled	100% Polled
	Heterozygous Polled	75% Polled, 25% Horned
	Horned	50% Polled, 50% Horned

BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

Structural soundness is a key component of our breeding program with all bulls, sale heifers and replacement females independently assessed as yearlings in line with the Beef Class Structural Assessment System. Any animal that does not score within the acceptable parameters is culled - no questions.

As great cattle structure and producer profitability go hand in hand, it is a primary reference for improving future progeny regardless of whether they are future breeders or destined for the dinner plate. Selecting animals with superior structural soundness is paramount to genetically improving structural traits in a beef breeding enterprise and thus profitability.

Structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain reducing income for the producer or feedlot, thus reducing the overall productivity of the Australian Beef Industry.

All Wormbete cattle were assessed by Liam Cardile of Beef XCel on 30 July 2021 and all VC cattle were assessed by Roger Evans of Bovine Scanning Services on 1 August 2021.

HOW TO USE THE SYSTEM:

The Beef Class Structural Assessment system is a collection of unbiased factual data measuring claw set, front and rear foot angle and rear leg side and hind view. Sheaths and temperament are also scored by the assessor.

The Beef Class Structural Assessment System uses a 1 to 9 scoring system:

- A score of **5** is ideal. (Note: Temperament Score of 1 is preferable).
- A score of **4 or 6** shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of **3 or 7** shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of **2 or 8** are low scoring animals and should be looked closely at before purchasing.
- A score of **1 (except temperament) or 9** should not be catalogued and are considered culls.

- BULLOCKHILLS GLADIATOR
- WORMBETE MISHKA K57
- WORMBETE DIANA D17
- WORMBETE YATES
- WORMBETE FIFI B112
- WORMBETE FIFI V14

President P181 (P) was retained for stud duties in 2020 and his progeny to date are proving to mirror his performance by excelling in all growth and carcass traits and R64 is a worthy example. Deep in colour, body and flank R64 expresses his wonderful softness throughout. Very long with big eye patches, big scrotal and a big opportunity.

PURCHASER:**PRICE:** \$

25

WORMBETE RUSTY RR R97 (PP)**BORN:** 19.08.2020 **ID NO:** AGOPR097 **HPS:** Homo Polled **COLOUR:** Red **EYE PIG:** 50/20 **GRADE:** Pure
